Hazardous Waste Generator Inspection Report

On site to conduct a routine inspection. This facility performs metal stamping operations. Hazardous waste generated on site includes: metal sludge (300lbs/yr), solidified oils (600lbs/yr) and waste oil (300 gal/yr). Their current EPA ID # is CAD981391220. Universal waste generated on site includes: fluorescent light tubes. Universal waste is being handled and disposed of improperly. Information was left with contact and more can be retained at www.dtsc.ca.gov. The facility is classified as a Standard Generator with 18 employee(s) involved with this program.

Summary of Violations

V445: Facility is currently improperly handling fluorescent light tubes. Under Universal Waste Regulations, facility may only properly handle fluorescent tubes intact for storage and shipment to a treatment facility. Per DTSC, Universal Waste Regulations allow for accidentally broken lamps to be cleaned up and the residue managed as Universal Waste. 'Best Management Practices for Managing Spent Fluorescent Tubes' (DTSC 1/26/2005) left with facility.

Comments

Supplement to October 18, 2007 inspection.

Access granted by: John Whittaker

The first re-inspection will be conducted on or about 11/23/07. Please call (714) 765-4040 if you have any questions. If all violations are not corrected by the specified date(s) and an additional re-inspection is necessary, a \$100.00 administrative fee will be charged for each additional re-inspection.

Forms are available at <http://www.anaheim.net/hms>. Should you require clarification on any of the above or assistance in returning to compliance, please contact the Specialist who conducted this inspection.
